Rebuilding the Food Processing Industry

Summer Shutdowns

Once again it is that time of year for family cookouts, vacations, road construction, and last but not least; summer shutdowns. Summer shutdowns give organizations the opportunity to perform annual maintenance on their machines as well as perform general housekeeping.

The issue with these shutdowns is that they take away valuable production time and also occupy your maintenance staff for extended periods of time. Both of these issues can prove to be very expensive to your organization.

How ABJ can Help

Our technicians have extensive experience in servicing and troubleshooting Stein/JBT equipment. Many of our customers will use our technicians as an extension of their maintenance staff. This allows for your employees to focus on the day to day maintenance of your processing equipment.

We take pride in our knowledge and expertise and are eager to help you and your staff make these summer shutdowns as efficient and worry-free as possible. Please do not hesitate to call your ABJ sales representative with any questions or concerns you may have.
